VETERA®.net
Leap into the Future

Vetera®.net is …

Vetera.net is the comprehensive practice and clinic management system for all aspects of veterinary medicine:

For 20 years now Vetera.net has evolved dynamically in accordance with the needs of the time.

It thereby not only adjusts to legal rules but more importantly accounts for the creative ideas and operational proposals brought forward by its users.

Vetera.net is indeed comprehensive because all areas in the veterinary field are taken into consideration, both with regard to species (small animal, livestock, equine practices) and with regard to business structure and size, reflecting - to an equal degree - the single practitioner as well as any group practice (with separate branch auditing if needed).

The professional management of veterinary clinics and colleges is achieved with the Vetera.net Campus edition.

So Vetera.net offers much more than just two decades of experience. By means of modern ergonomics and many invisible tools it adjusts to the individual needs.

But above all, Vetera.net unifies all modern technologies:

- onsite and external lab systems
- diagnostic imaging and digital xray, sonography, CAT-Scan, MRT (PACS, DICOM3®)
- Allround communication (email, telephone, fax)
- Connecting with other data recording systems

Solutions – Interoffice System
GP. Software

- All from within one company: software engineering, sales, installation, support, training
- Employing the most secure and modern technologies – I.E.: Microsoft SQL-Server, .NET
